Introducing an innovation in the realm of bulk powder and granular handling: Econad proudly presents the SFX Bulk Bag.

Crafted from PVC-coated polyester fabric with precision-welded seams, the SFX Bulk Bag offers absolute watertightness. In fact, it's so impervious that it can withstand outdoor exposure without compromising its performance.

BULK BAGS

These specialized bags are designed to safeguard valuable hygroscopic products from the harshest external conditions. With a lifespan surpassing three years, each SFX Bulk Bag pays for itself through countless journeys. Even if damaged, quick repairs won't compromise quality or safety.

This reusable packaging solution alleviates environmental strain by reducing the waste generated by disposable alternatives. PVC bulk bags, with roots dating back over four decades, were initially employed in the Middle East deserts and Southeast Asian jungles for oil industry chemicals. Decades of experience in these rigorous settings have led to product refinements. Today, the SFX Bulk Bag is trusted by Europe's top manufacturers in industries spanning chemicals, food, and pharmaceuticals, solidifying its status as the ultimate bulk bag.

Tailored to meet diverse needs, SFX Bulk Bags accommodate abrasive, sterile, chemically sensitive, conductive, and even corrosive materials. A range of colors facilitates easy product identification and minimizes errors due to damaged labels.

When empty, these bags collapse for efficient storage and hassle-free refilling. Customizations like drawstrings, special closures, double skirts, and hygiene flaps align seamlessly with existing filling and discharging equipment.

For specialized applications, SFX Bulk Bags can be coated differently. Polyurethane coatings suit food and pharmaceutical products, while antistatic coatings ensure safe handling in volatile environments. Moreover, SFX Bulk Bags can transport UN-certified hazardous materials, complete with UN certification.

Safety remains paramount, with an 8:1 safety ratio on the safe working load and wear protection on lifting loops. Welded document pockets keep essential documentation visible and safeguarded from moisture.
