

# SKIMMER "DELTA"

ECONAD's Delta skimmer for pumping oil products and lubricants in shallow water and on the river is a strong and lightweight device that is ideal for places where the use of large skimmers is impossible or ineffective.

This shallow water oil and oil skimmer consists of a free-floating skimmer float capable of removing up to 30 tonnes per hour, depending on pump/oil product type and viscosity.

The floating skimmer module "Delta" is suitable for any aspiration pump or vacuum installation. It is easy to control and easy to use, and can work in hard-to-reach places, such as under bridges or around piers.

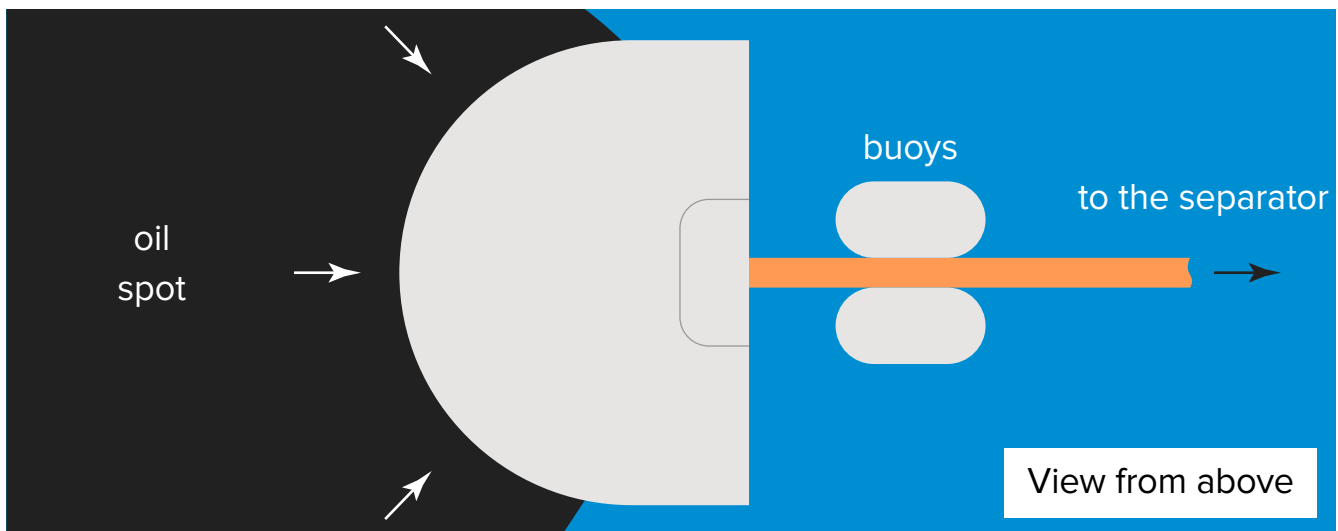

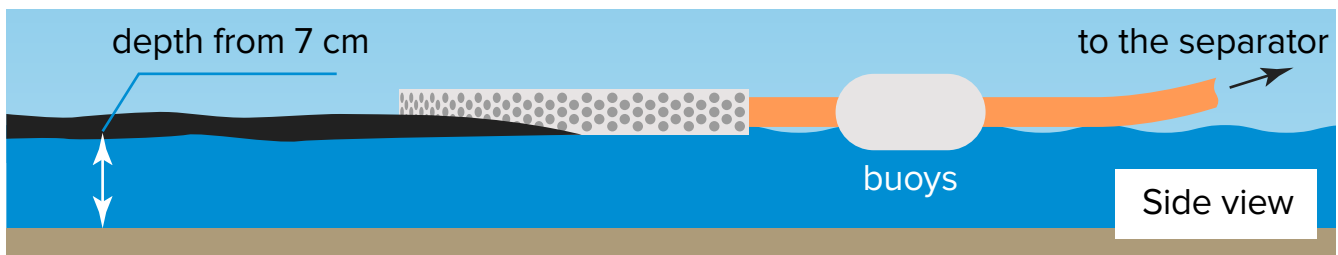

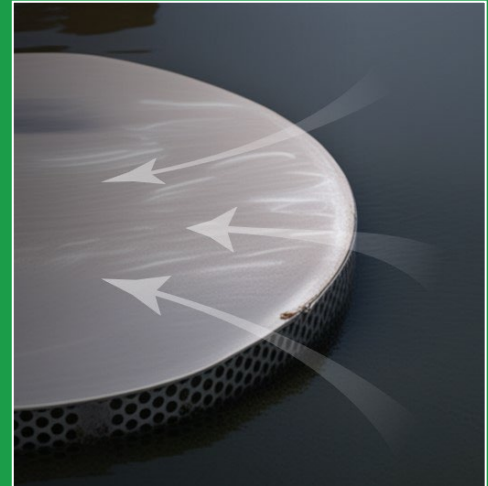

**ECONAD**

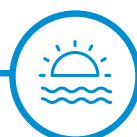

# SKIMMER "DELTA"

The skimmer module can work at a depth of 7 cm, which makes it ideal for cleaning rivers, lakes and other bodies of water with a shallow depth.

The lightweight design makes the shallow pump oil skimmer particularly useful for cleaning beaches, rivers and other coastal areas, as well as in ports, harbors and other water bodies.
